Mac_SAT00868 (LG12, strand - vs family): spacer curation sheet, median spacer 5,521 bp

dot plots: 10-mers kept when >= 3 consecutive along a diagonal; slate = same strand, magenta = reverse complement; pale-blue bands = microsatellites (masked); pale-teal shading = 300 bp of satellite flanking the representative

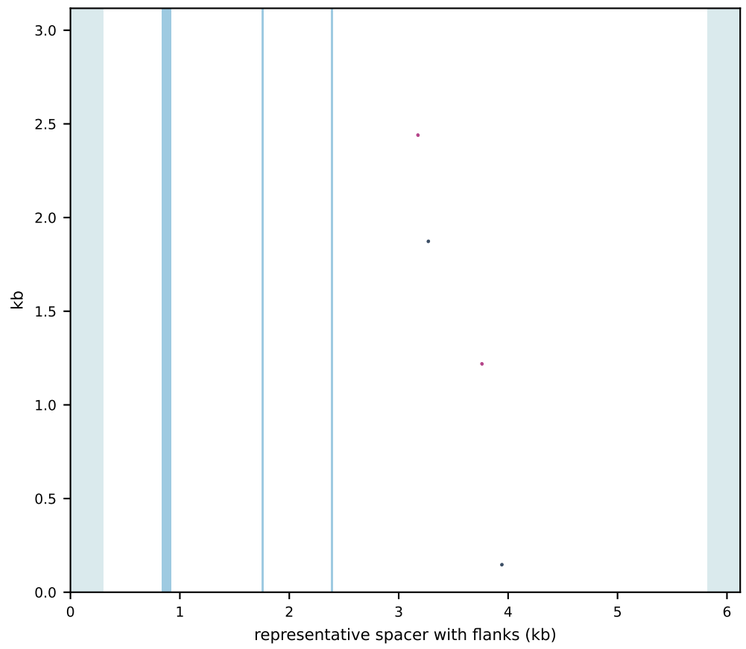

A representative vs itself (5,521 bp + 300 bp satellite each side, shaded)

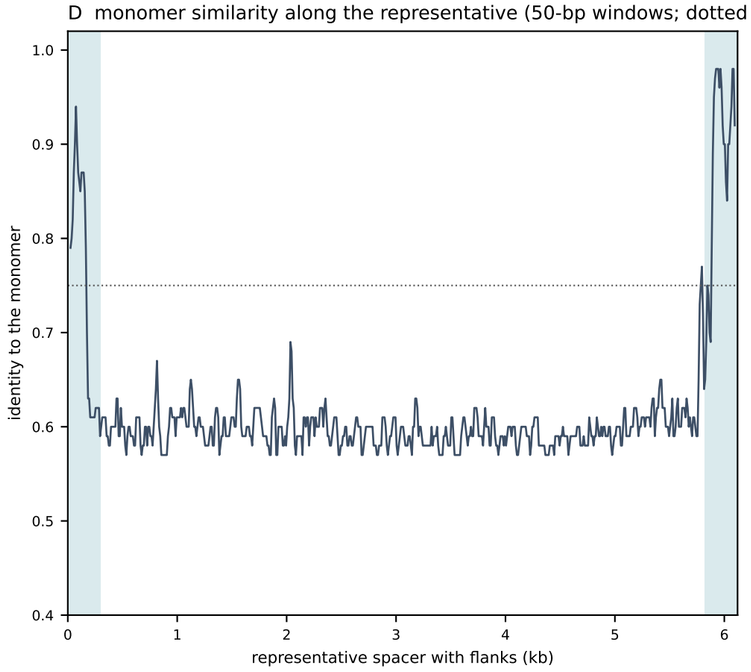

B vs LG04 RTE-type spacer int15

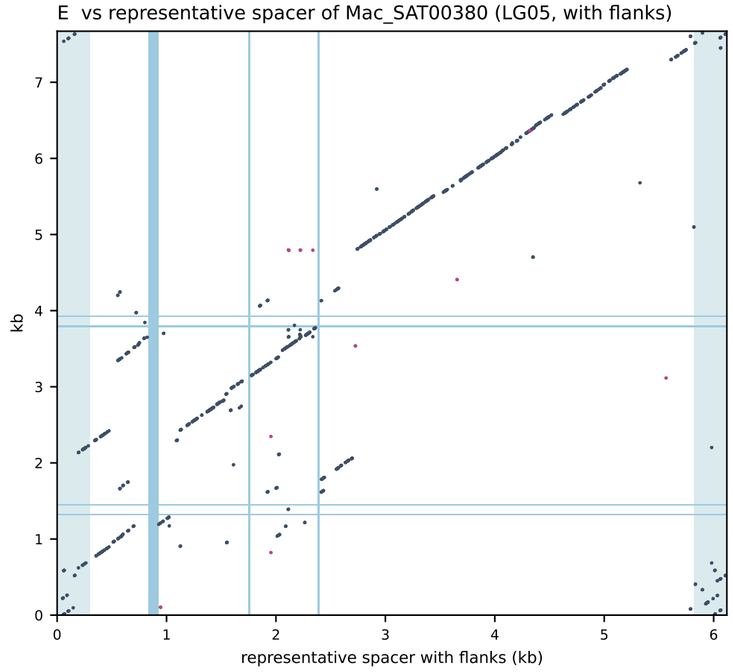

C vs RTE source consensus

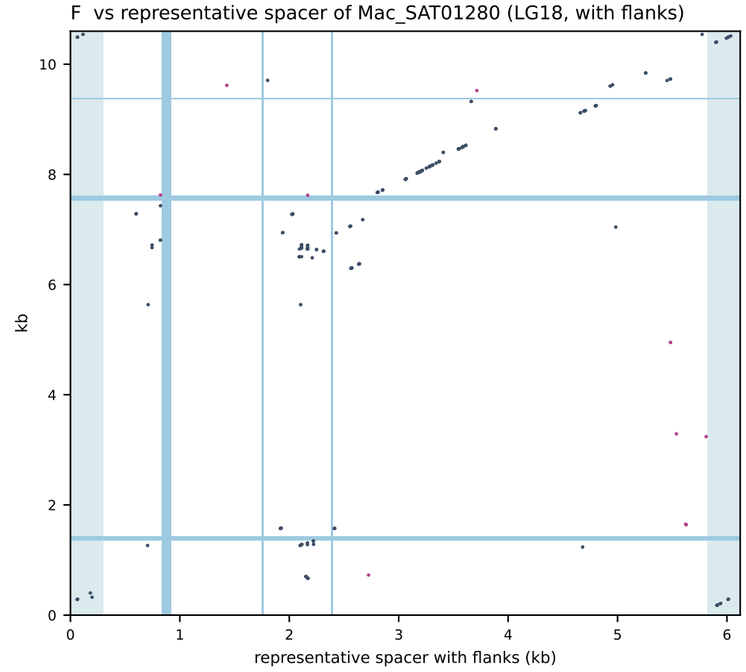

D monomer similarity along the representative (50-bp windows; dotted = 0.75)

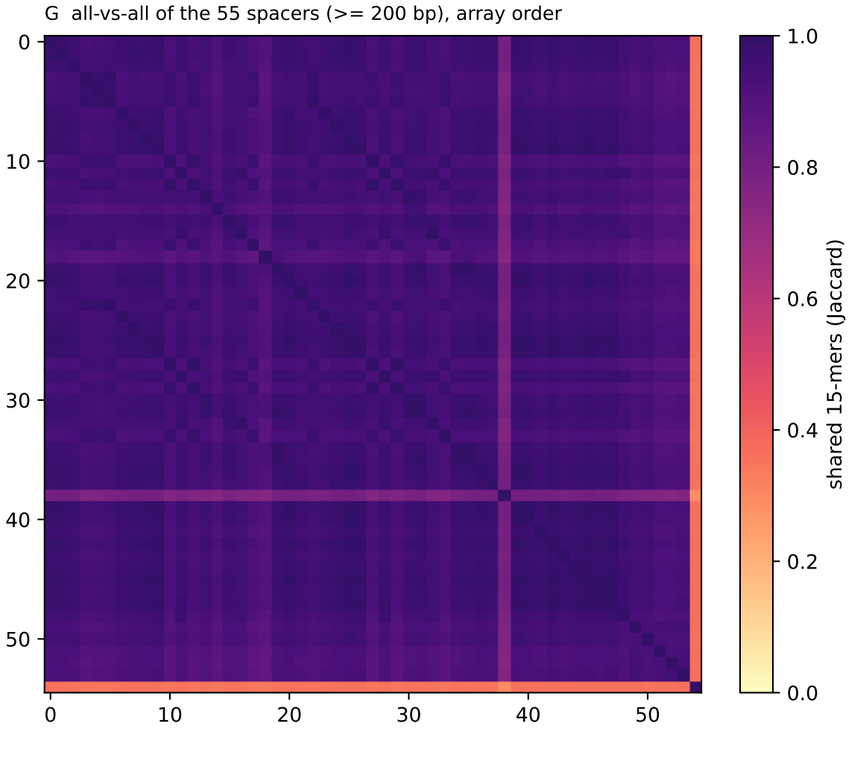

E vs representative spacer of Mac_SAT00380 (LG05, with flanks)

F vs representative spacer of Mac_SAT01280 (LG18, with flanks)

G all-vs-all of the 55 spacers (>= 200 bp), array order

spacer lengths
